EcoGreenGrid

EcoGreenGrid is a tough, durable, interlocking grid system designed to provide turf protection, ground reinforcement and erosion control. It comes pre-assembled in lightweight 3ft. X 4ft. layers for easy handling and installation.

EcoGreenGrid is manufactured in the USA from 100% recycled plastics.

EcoGreenGrid provides an economical and environmentally sustainable alternative to asphalt, concrete or paving.

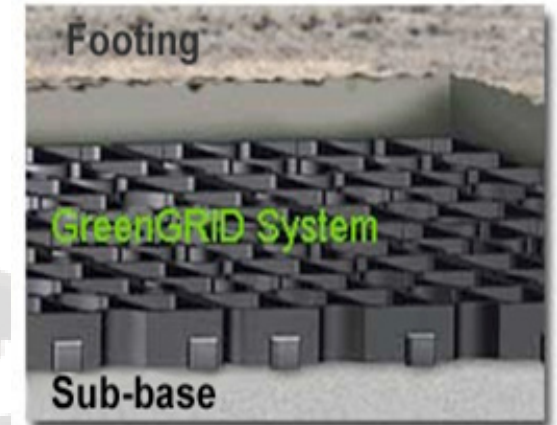

Where is EcoGreenGrid used?

EcoGreenGrid can be used as either a temporary or permanent ground reinforcement. It is used to reinforce lawns and other grassy areas to prevent mud and damage to the ground. Once laid it can be filled with stone, earth or seeded. When the grass has grown EcoGreenGrid becomes invisible but still resists wear and compression.

EcoGreenGrid is perfectly suited to pathways, landscaping, parking lots or driveways and has numerous sporting applications such as equestrian facilities and golf courses.

EcoGreenGrid provides excellent ground support and prevention from erosion.

EcoGreenGrid has a multitude of applications providing ground reinforcement, erosion control and turf protection.

EcoGreenGrid product is great for...

- Mud Control
- Equestrian & Livestock facilities
- Landscape
- Driveways
- Pathways
- Parking Lots
- Erosion Control

EcoGreenGrid

your Equestrian and Landscape Mud Control Solution.
